

LINE TENSION MONITOR DILLON QUICK CHECK

The Dillon Quick-Check Tension Meter quickly measures tension in cable guardrails, guy lines and overhead wires. It installs, measures and removes in seconds. The digital loadcell is highly accurate and requires no lookup or correction tables.

The Quick-Check can be employed in many industries to ensure proper tensioning. Typical applications include tower and stack guy wires, pre-tensioned cable barriers, bridges, elevators, winch rope, overhead electric transit wires, fall arrest systems, aircraft cables and utilities.

Tension capacities:

35 kN / 3500 kg / 8000 lb

Wire sizes:

4.75mm to 25.4mm

3/16 inch through 3/4 inch

Accuracy:

+ 3% instrument capacity

(calibrated to specific wire size & type)

+ 5% with same wire diameter as

(calibrated but different wire type)
